

# TEMPORARY ACCESS MATS

Our ground protection mats can be used over soft or sensitive ground, on hard standing areas or firmer ground. These mats are particularly suited to landscapers, construction sites and outdoor events.

These mats are a fast and efficient way of providing temporary access routes for construction site traffic and work personnel, as well as for cars and visitors at public events. The ground protection mats have 6 hand holes making them easy to off-load from trucks or pallets. Their lightweight but heavy duty nature enables quick and easy installation by two people.

Having been designed and engineered with a 'non-slip' surface, this substantially improves the grip and reduces slippage, even in the most challenging weather or ground conditions.

The ground protection mats can be connected together using the simple but yet effective Hand Hole Connectors which slip through each hand hole and connect from the top with bolt and washers.

## SPECIFICATIONS

**Size:** 2.4m x 1.2m x 15mm

**Weight:** 44kg per mat

**Material:** 100% recycled polyethylene

- 6 Hand holes for easy handling and installation
- Non-slip surface for optimal grip
- Unique hand hole connectors
- Low transportation and handling costs

**BORDER ACCESS**  
**CHERRY PICKER HIRE**
